

Vladyslav Makaruk

PYTHON DEVELOPER

ABOUT

>> Python developer role with a goal to become Solution Architect, combining knowledge of networking, development and system analysis.

EXPERIENCE

2020-2019 | SRE

Dev.pro – Kharkiv, Ukraine

>> Developing Python scripts for AWS accounts management and reporting. Django pet-project (REST, Gitlab, AWS+CI/CD).

>> The Site Reliability Engineer is the most responsible role to work in shifts rotations 24x7, assuring the components are watched over, troubleshooting alarms and alerts for the services, cross teams' work and support. Have to learn AWS system, Jenkins, Jira, Git, AD management, Linux tools and scripting.

>> My main achievement so far – in depth understanding of AWS Cloud system, teams' coordination for the fastest troubleshooting and service recovery.

2019-2016 | Leading System Administrator

National museum "Sophia Kyivska" – Kyiv, Ukraine

>> This role where I was a head of IT department. I reorganized internal flows to ensure the user support, provide resources and supplies, set up new systems on routine. In my working time, the department implemented Ticket Sale software complex in museum (Java). It includes points of sale, check points, real time monitoring, reporting system.

>> My main achievement was – to organize the work of the team as a leading specialist. In depth knowledge of Java, commercial software, fiscal systems, Excel advanced reporting usage.

2016-2001 | System engineer

National museum "Sophia Kyivska" – Kyiv, Ukraine

>> The position where I learned to build networking systems, set up the routers, servers, manage user accounts and various routine tasks: regular backups, documentation, reporting.

>> My main achievement was – structured LAN inside buildings and outside connections between them, distributed WiFi network with guest access, firewall and internet gateway.
